

Supplementary information S4 (figure) | **Comparison of chaperone nucleotide binding sites.** Conformations of ATP or ATP analogues in the nucleotide pockets of Hsp60 (PDB 1svt), Hsp70 (PDB 4b9q), Hsp90 (PDB 2cg9) and Hsp100 (PDB 1g3i). The nucleotides are shown in CPK colours and the side chains of adjacent residues are shown with different backbone colours.
